The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 7, 9-11, 13, 14, 17-20, 23 and 26-28 are rejected under 35 U.S.C. 102(b) as anticipated by Yu (US 6,140,948). Yu discloses a multi-stage switched capacitor algorithmic ADC with transparent/continuous calibration. Yu discloses the use of two capacitor banks (fig. 3; col. 6, lines 12-67) that process the conversion signal and calibration signal in an interleaved fashion (col. 6 lines 66-67). The calibration signal are digitized and stored for subsequent corrections (col. 2, line 43-57). Polarity reversal of the calibration signals is disclosed by Yu in col. 6 line 7 where the complement is used.

Claims 6, 8, 12, 15, 16, 21, 22, 24 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Johnson et al. (US 6,169,502 B1) discloses a pipelined capacitive ADC with an adjustable calibration capacitor.
